PROFESSIONAL SUMMARY

Full-stack developer who has taken products from concept to production for hospitals, retailers, logistics companies and non-profits. Built and piloted a multi-tenant, offline-first hospital management system at Enoma Medical Center, used by doctors, nurses, pharmacists and lab staff, and trained 30+ staff on it. Strong in Next.js, Supabase/PostgreSQL and AI-assisted development, with a focus on spotting real business gaps and shipping reliable, tailored solutions.

TECHNICAL SKILLS

Frontend: Next.js (App Router, CSR, SSR), React, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML, CSS

Backend: Node.js, Next.js API routes, PHP/Laravel, Go and Python (basics)

Databases: PostgreSQL (Row Level Security), Supabase, MySQL, MongoDB

Integrations: Paystack, Maps APIs, Webhooks, WhatsApp automation, Groq AI / LLM integration, Cloudflare R2

Tools: Git, GitHub, Postman, Vercel, VS Code, Figma, Claude

Practices: Multi-tenant architecture, RBAC, offline-first PWAs, responsive design, AI-assisted development

PROFESSIONAL EXPERIENCE

Lead Full-Stack Engineer & IT Specialist – Revisit Tech

Jan 2026 – May 2026

Revisit HMS for Enoma Medical Center: cloud-based, offline-capable hospital management system for Nigerian private hospitals and clinics. ***Status: piloted live, currently paused.***

- Designed a slug-based multi-tenant architecture on Supabase, fully isolating each hospital's data.
- Enforced role-based access control at the database level with PostgreSQL Row Level Security, plus UI gatekeeping, preventing unauthorised access across staff roles.
- Built an offline-first PWA using a service worker and an IndexedDB sync queue so clinics keep working through connectivity loss.
- Integrated Groq AI to turn doctors' voice input into structured consultation notes, cutting manual documentation time.
- Delivered patient registration, a family membership-card system with active/expiring subscription tracking, clinical records, real-time inventory, HMO/NHIA billing, pharmacy, and ward and bed management.
- Built a Labs module covering test requests, result submission, file uploads and automatic abnormal-value detection.
- Added drug-trend and repeat-prescription tracking to surface unusual or high-frequency drug use and flag previously prescribed drugs.
- Trained 30+ staff, monitored adoption across departments, resolved hardware and network faults to minimise clinical downtime, and managed the backlog of technical requests.
- Piloted live for 2 weeks in a hybrid paper-and-digital workflow, used by doctors, nurses, pharmacists, lab staff and hospital management, with real patients registered; loaded and tested 1,000+ patient records to validate billing workflows.

Stack: *Next.js, Supabase, PostgreSQL, Groq AI, IndexedDB, Tailwind CSS, Vercel* | ***See project »***

Freelance Full-Stack Developer – Mini Dubai Boutique

August 2026 (1 month)

- Built and deployed a clothing e-commerce site with a storefront, admin panel with full product CRUD, and New Arrivals management.
- Automated bulk image upload with JPEG/WebP conversion, shrinking large files to cut storage use.
- Integrated Groq AI image-to-text to auto-generate product content, saving time on dozens of listings.
- Used Supabase for product and order data and Cloudflare R2 for images, keeping the stack on free-tier infrastructure.

Stack: *Next.js, Supabase, Cloudflare R2, Groq AI, Tailwind CSS, Vercel* | ***See project »***

Freelance Full-Stack Developer – Shipping & Logistics Company Aug 2025 – Jan 2026

- Built and deployed the company website with live map navigation, product listings, email automation and contact flows.
- Integrated Maps API to show shipping routes and service areas, giving customers real-time location context.
- Built a Supabase/PostgreSQL-backed catalogue the company can update on its own.
- Replaced manual enquiry handling with a structured contact pipeline that routes requests straight to the business.

Stack: *React, Next.js, Maps API, Supabase, PostgreSQL, Tailwind CSS* | ***See project »***

Full-Stack Developer – Hopes Bridge (Charity, Remote) 2025

- Built a complete mobile-optimised MERN-stack site with campaigns, stories and donations.
- Implemented an online donation flow with Paystack so the organisation can accept and track contributions.
- Built a campaign section that lets the team publish and manage fundraising initiatives without developer help.

Stack: *React, Next.js, TypeScript, MongoDB, Tailwind CSS, Paystack* | ***See project »***

UI/UX Designer – Ajanjula-27 Oct 2025 – Nov 2025

- Designed and built landing pages for a political re-election campaign under tight deadlines and close client oversight.
- Ran A/B tests and delivered responsive layouts.

Stack: *Figma, React, Next.js, Tailwind CSS, CMS* | ***See project »***

Full-Stack Developer Intern – SyntechHub (Remote, India) October 2025

- Delivered frontend features on deadline in a structured team workflow.

Stack: *Next.js, React*

SELECTED PROJECTS

Spa & Beauty Booking Platform | **See project »**

End-to-end booking and client-retention system for beauty and wellness businesses.

- Online booking with slot locking and Paystack payments.
- Automated WhatsApp follow-ups for lapsed clients, and webhook-triggered owner notifications on payment confirmation.

EDUCATION & CERTIFICATION

Certified Full Stack Developer – Code Academy, 2025

Senior Secondary Certificate Examination (SSCE), Nigeria
