PROFESSIONAL SUMMARY

Full-stack developer who has taken products from concept to production for hospitals, retailers, logistics companies and non-profits. Built and piloted a multi-tenant, offline-first hospital management system at Enoma Medical Center, used by doctors, nurses, pharmacists and lab staff, and trained 30+ staff on it. Strong in Next.js, Supabase/PostgreSQL and AI-assisted development, with a focus on spotting real business gaps and shipping reliable, tailored solutions.

TECHNICAL SKILLS

Frontend	Next.js (App Router, CSR, SSR), React, TypeScript, JavaScript, Tailwind CSS, HTML, CSS
Backend	Node.js, Next.js API routes, PHP/Laravel, Python (Pandas, Scikit-learn)
Databases	PostgreSQL (Row Level Security), Supabase, MySQL, MongoDB
Integrations	Paystack, Maps APIs, Webhooks, WhatsApp, Groq AI / LLMs, Cloudflare R2
Tools	Git, GitHub, Postman, Vercel, VS Code, Figma, Claude, Burp Suite, Nmap, Kali Linux (learning)
Security Testing	Nmap, Burp Suite, API endpoint discovery, authentication, input-validation and access-control testing, rate-limit evaluation and remediation
Practices	Multi-tenant architecture, RBAC, offline-first PWAs, responsive design, AI-assisted dev

PROFESSIONAL EXPERIENCE

Lead Full-Stack Engineer & IT Specialist – Revisit Tech

Jan 2026 – May 2026

Revisit HMS for Enoma Medical Center: cloud-based, offline-capable hospital management system for Nigerian private hospitals and clinics. ***Status: piloted live, currently paused.***

- **Multi-tenant architecture:** designed a slug-based setup on Supabase that fully isolates each hospital's data.
- **Access control:** enforced role-based access at the database level with PostgreSQL Row Level Security, plus UI gatekeeping, preventing unauthorised access across staff roles.
- **Offline-first PWA:** service worker and IndexedDB sync queue so clinics keep working through connectivity loss.
- **AI consultation notes:** integrated Groq AI to turn doctors' voice input into structured notes, cutting manual documentation time.
- **Core modules:** patient registration, family membership cards with active/expiring subscription tracking, clinical records, real-time inventory, HMO/NHIA billing, pharmacy, and ward and bed management.
- **Labs and prescribing insight:** Labs module with requests, results, file uploads and automatic abnormal-value detection, plus drug-trend and repeat-prescription tracking to flag unusual or repeated drug use.
- **IT support:** trained 30+ staff, monitored adoption across departments, resolved hardware and network faults to minimise clinical downtime, and managed the backlog of technical requests.
- **Live pilot:** 2 weeks in a hybrid paper-and-digital workflow, used by doctors, nurses, pharmacists, lab staff and hospital management, with real patients registered; loaded and tested 1,000+ patient records to validate billing workflows.

Stack: *Next.js, Supabase, PostgreSQL, Groq AI, IndexedDB, Tailwind CSS, Vercel* | ***See project »***

Freelance Full-Stack Developer – Mini Dubai Boutique

August 2026 (1 month)

- Built and deployed a clothing e-commerce site with a storefront, admin panel (full product CRUD) and New Arrivals.
- Automated bulk image upload with JPEG/WebP conversion, shrinking large files to cut storage use.
- Integrated Groq AI image-to-text to auto-generate product content, saving time on dozens of listings.
- Used Supabase for product and order data and Cloudflare R2 for images, on free-tier infrastructure.

Stack: *Next.js, Supabase, Cloudflare R2, Groq AI, Tailwind CSS, Vercel* | ***See project »***

Freelance Full-Stack Developer – Shipping & Logistics Company

Aug 2025 – Jan 2026

- Built and deployed the company website with live map navigation, product listings, email automation and contact flows.
- Integrated Maps API to show shipping routes and service areas, giving customers real-time location context.
- Built a Supabase/PostgreSQL-backed catalogue the company can update on its own.
- Replaced manual enquiry handling with a structured contact pipeline straight to the business.

Stack: *React, Next.js, Maps API, Supabase, PostgreSQL, Tailwind CSS* | ***See project »***

Full-Stack Developer – Hopes Bridge (Charity, Remote)

2025

- Built a complete mobile-optimised MERN-stack site with campaigns, stories and donations.
- Implemented an online donation flow with Paystack so the organisation can accept and track contributions.
- Built a campaign section that lets the team publish and manage fundraising initiatives without developer help.

Stack: *React, Next.js, TypeScript, MongoDB, Tailwind CSS, Paystack* | ***See project »***

UI/UX Designer – Ajanjula-27

Oct 2025 – Nov 2025

- Designed and built landing pages for a political re-election campaign under tight deadlines.
- Ran A/B tests and delivered responsive layouts.

Stack: *Figma, React, Next.js, Tailwind CSS, CMS* | ***See project »***

Full-Stack Developer Intern – SyntechHub (Remote, India)

October 2025

- Delivered frontend features on deadline in a structured team workflow.

Stack: *Next.js, React*

SELECTED PROJECTS

Sporting Predicts (Nathan) | See project »

Football prediction platform with a Python statistical and machine-learning engine

- **Prediction engine:** built "Nathan" in Python with Pandas and Scikit-learn, using Blending and Poisson models on historical match data from 2020.
- **Multi-market output:** match result, double chance, over/under goals, both teams to score and expected goals, with outcomes tracked against real results (68% accuracy on tracked multi-selection predictions).
- **Data pipeline:** pulled fixtures and results from a football API into Supabase, with an endpoint to refresh data.
- **Admin dashboard:** Next.js app with Supabase Auth where an administrator manages leagues and chooses which predictions go to the public and VIP sections.

Stack: *Python, Pandas, Scikit-learn, Next.js, Supabase, PostgreSQL*

EDUCATION & CERTIFICATION

Certified Full Stack Developer – Code Academy, 2025

Senior Secondary Certificate Examination (SSCE), Nigeria
